DIAMONDBACK®

CABLE & HOSE BRIDGE SYSTEMS

Protect Valuable Cable & Hoses From Vehicle Traffic

Diamondback® Modular Cable & Hose Bridge Systems provide protection for valuable cable and hoses while ensuring a method of safe passage for vehicles. They replace wooden and metal fabricated ramps. High density, all-weather urethane construction protects from damage by physical pressure, and reduces cable and hose maintenance and replacement costs.

Diamondback® Modular Bridge Systems can be used to protect lines up to 6.5 inch diameter. The lightweight, modular design of inter-connecting, 16 inch wide sections provides multi-length flexibility. The system is easy to handle, transport, set-up, break-down, and store.

The Diamondback® Bridge System features a diamond plate traction design on ramp surfaces and built-in handholds. There are no hinges or pins to break or lose and the system is ideal for fire department, construction site, maintenance shop, public utility, manufacturing plant, highway department and military applications. Four system sizes available.

Model UHB-5060 Bridge
Protects lines up to 6.5 in. diameter.
