

Transfer Switch Assemblies

JCSI stocks and sells quality MIDWEST brand Manual Transfer Switches. The switches can be preassembled with several styles of cam connection panels, including the Micrin GCB series, the JCSI Hoffman Wire Trough Custom Assemblies or many styles of custom designs, pre-wired and ready to install.

For example, here is a 200 amp transfer switch pre-wired with a lower cabinet where the lower panel opens to reveal cam style connectors for attaching the input power cables from a gen-set.

The transfer switches, interconnect cabinets, and custom power cables are available from JCSI in single or three phase configurations with 120 volt, 240 volt, or 480 volt ratings.

Connecting cables can be furnished in lengths to 200 ft.

Please call us 800-226-5657 to discuss your transfer switch needs.
